
Period records
Bids of online auctions; hourly energy use, rentals, and temperatures
Domain ontology
Target property and the time at which each value becomes public
SHACL shapes
sh:lessThanOrEquals between public values and the target
Validation
pySHACL reports on observed data and on forecast graphs
Public state at t
Values known at 25%, 50%, and 75% of the period
Any regressor
Ridge, Random Forest, XGBoost, CatBoost, and conformal intervals
Compiled projection
Interval $[L_i(t), U_i(t)]$ from shapes observable by t;
$\hat{y}_i \mapsto \min\{\max\{\hat{y}_i, L_i(t)\}, U_i(t)\}$
Corrected outputs
Point forecasts and interval end points inside the bounds
